## Case Study

### Simplifying Builds using AWS Continuous Integration And Delivery

Access uses AWS CodePipeline – a continuous integration and continuous delivery service – for fast and efficient application and infrastructure updates.

#### Benefits Of AWS Code Pipeline:

##### Rapid Delivery:

Automated software release process allows rapid release of new features.

##### Improved Quality:

The automated build, test, and release process allows for testing of each code change to catch and fix bugs early.

##### Configurable Workflow:

A graphical user interface allows modelling of the different stages of the software release process.

##### Quick Start:

With no servers to provision or set up, modelling the software release process can begin immediately.

##### Easy Integration:

AWS CodePipeline can be easily adapted to an organization's specific needs. Pre-built or custom plugins can be used in any step of the release process.
